

This assignment will not be graded and is only for practice.

Note : This activity is only for practice purpose and it will not be counted towards the Final score

A database system is conceptualized in terms of three levels of abstraction. Which of the following is not one among these levels?

1 point

- ☐ physical level
- ☐ application level
- ☐ logical level
- ☐ view level

Which of the following levels describes how the records are actually stored?

1 point

- ☐ physical level
- ☐ application level
- ☐ logical level
- ☐ view level

Which of the following levels describes the relationship between the data in a database system?

1 point

- ☐ physical level
- ☐ application level
- ☐ logical level
- ☐ view level

At the, application programs may hide certain information for security purposes.

1 point

- ☐ physical level
- ☐ application level
- ☐ logical level
- ☐ view level

A(n) describes how the data is organized in a database.

1 point

- ☐ schema
- ☐ instance
- ☐ table
- ☐ record

Which of the following languages defines and manipulates the schema of a database?

1 point

- ☐ Data Definition Language
- ☐ Data Manipulation Language
- ☐ Data Control Language
- ☐ Transaction Control Language

Which of the following languages can be used to create new records and manipulate existing records in a database?

1 point

- ☐ Data Definition Language
- ☐ Data Manipulation Language
- ☐ Data Control Language
- ☐ Transaction Control Language

Which of the following is not a pure query language?

1 point

- ☐ Relational algebra
- ☐ Tuple relation calculus
- ☐ Domain relation calculus
- ☐ Structured query language

Which of the following is/are valid schema type(s)?

1 point

- ☐ Physical schema
- ☐ Application schema
- ☐ Logical schema
- ☐ View schema

Which of the following is/are **true** about schemas in database systems?

1 point

- ☐ It describes the overall structure of the database system.
- ☐ It is the actual content of the database at a particular instant of time.
- ☐ It is similar to the type information of a variable in programming languages.
- ☐ It is similar to the value of a variable in programming languages.

Which of the following is/are **true** about instances in database system?

1 point

- ☐ It describes the overall structure of the database system
- ☐ It is the actual content of the database at a particular instant of time.
- ☐ It is similar to the type information of a variable in programming languages.
- ☐ It is similar to the value of a variable in programming languages.

Which of the following is/are the content(s) of a data dictionary?

1 point

- ☐ Database schema
- ☐ Database instance
- ☐ Integrity constraints
- ☐ Authorizations

Which of the following is/are **true** about SQL?

1 point

- ☐ It is a commercial query language.
- ☐ It is a Turing machine equivalent language.

☐ It can be embedded in some high-level language.

Application programs use interfaces like JDBC and ODBC to send SQL queries to a database.

Which of the following decisions is/are part of logical design of a database?

1 point

☐ How should a database be structured to fulfill business requirements?

☐ What are the attributes to be recorded in the database?

☐ What should be the physical layout of the database?

☐ How the attributes can be distributed among the collection of schemas?

Which of the following decisions is/are part of physical design of a database?

1 point

☐ How database has to be structured to fulfill business requirements?

☐ What are the attributes to be recorded in the database?

☐ What should be the physical layout of the database?

☐ How the attributes can be distributed among the collection of schemas?
