

A subquery is a _____ expression that is nested within another query.

- ☐ select-from-while
- ☐ select-from-where
- ☐ select-for-where
- ☐ start-from-where

Yes, the answer is correct.

Score: 2

Accepted Answers:

select-from-where

The correct syntax for the DELETE statement is

2 points

- ☐ DELETE SELECT table_name WHERE condition;
- ☐ DELETE WHERE table_name FROM condition;
- ☐ DELETE table_name FROM condition;
- ☐ DELETE FROM table_name WHERE condition;

No, the answer is incorrect.

Score: 0

Accepted Answers:

DELETE FROM table_name WHERE condition;

Which of the following is the correct syntax for the INSERT statement?

2 points

- ☐ INSERT table_name (col1, col2, ...)
- ☐ VALUES (value1, value2, ...);
- ☐ INSERT table_name (col1, col2, ...)
- ☐ INTO (value1, value2, ...);
- ☐ INSERT INTO table_name (col1, col2, ...)
- ☐ VALUES (value1, value2, ...);
- ☐ INSERT VALUES table_name (col1, col2, ...)
- ☐ INTO (value1, value2, ...);

No, the answer is incorrect.

Score: 0

Accepted Answers:

```
INSERT INTO table_name (col1, col2, ...)  
VALUES (value1, value2, ...);
```

Which among the following is the correct way for insertion of new tuples into a **student** relation?

2 points

- ☐ INSERT VALUES INTO student
WHERE ('SF001', 'MALE', 'AGE', 8.9);
- ☐ INSERT INTO student
VALUES ('SF001', 'MALE', 'AGE', 8.5);
- ☐ INSERT VALUES INTO student
INTO ('SF001', 'MALE', 'AGE', 7.8);
- ☐ INSERT student
VALUES ('SF001', 'MALE', 'AGE', 9.3);

Yes, the answer is correct.

Score: 2

Accepted Answers:

```
INSERT INTO student  
VALUES ('SF001', 'MALE', 'AGE', 8.5);
```

Which among the following is the correct syntax for the UPDATE statement?

2 points

- ☐ UPDATE table_name
SET column1 = value1, column2 = value2, ...
WHERE condition;
- ☐ SET table_name
WHERE column1 = value1, column2 = value2, ...
UPDATE condition;
- ☐ SET table_name
UPDATE column1 = value1, column2 = value2, ...
WHERE condition;
- ☐ UPDATE table_name
WHERE column1 = value1, column2 = value2, ...
SET condition;

Yes, the answer is correct.

Score: 2

Accepted Answers:

```
UPDATE table_name  
SET column1 = value1, column2 = value2, ...  
WHERE condition;
```

Which of the following is the correct way of updating the **instructor** table?

2 points

UPDATE instructor
SET salary = salary * 1.03
☐ WHERE salary > 100000;

UPDATE instructor
SET salary = salary * 1.03
☐ SELECT salary > 100000;

SET instructor
UPDATE salary = salary * 1.03
☐ WHERE salary > 100000;

UPDATE instructor
WHERE salary = salary * 1.03
☐ SET salary > 100000;

Yes, the answer is correct.

Score: 2

Accepted Answers:

```
UPDATE instructor  
SET salary = salary * 1.03  
WHERE salary > 100000;
```

Which of the following options is equivalent to the SQL query shown below?

2 points

```
SELECT DISTINCT T.name  
FROM instructor as T, instructor as S  
WHERE T.salary > S.salary and S.dept name = 'Biology';  
SELECT name  
FROM instructor  
WHERE salary > some (SELECT salary  
FROM instructor  
☐ WHERE dept name = 'Biology');
```

SELECT name
FROM instructor
WHERE salary <> some (SELECT salary
FROM instructor
☐ WHERE dept name = 'Biology');

SELECT name
FROM instructor
WHERE salary = some (SELECT salary
FROM instructor
☐ WHERE dept name = 'Biology');

SELECT name
FROM instructor
WHERE salary < some (SELECT salary
FROM instructor
☐ WHERE dept name = 'Biology');

Yes, the answer is correct.

Score: 2

Accepted Answers:

SELECT name
FROM instructor
WHERE salary > some (SELECT salary
FROM instructor
WHERE dept name = 'Biology');

Which among the following is CORRECT in the context of **some** clause in SQL?

2 points

☐ $7 < \text{some}(3,9,7) = \text{FALSE}$

☐ $7 < \text{some}(3,7) = \text{FALSE}$

☐ $7 = \text{some}(6,7) = \text{FALSE}$

☐ $7 \neq \text{some}(3,9,7) = \text{FALSE}$

No, the answer is incorrect.

Score: 0

Accepted Answers:

$7 < \text{some}(3,7) = \text{FALSE}$

Which among the following is INCORRECT in the context of **all** clause in SQL?

2 points

☐ $7 < \text{all}(3,9,7) = \text{FALSE}$

☐ $7 > \text{all}(9,7) = \text{FALSE}$

☐ $7 = \text{all}(6,7) = \text{TRUE}$

☐ $7 \neq \text{all}(3,9,8) = \text{TRUE}$

Yes, the answer is correct.

Score: 2

Accepted Answers:

$7 = \text{all}(6,7) = \text{TRUE}$

Consider the following SQL statements:

2 points

```
UPDATE instructor
SET salary = salary * 1.03
WHERE salary > 100000;
```

```
UPDATE instructor
SET salary = salary * 1.05
WHERE salary <= 100000;
```

Which of the following SQL statements is equivalent to the SQL statements shown above?

☐

```
UPDATE instructor
SET salary = WHEN
    CASE salary <= 100000 then salary * 1.05
    ELSE salary * 1.03
END
```

☐

```
UPDATE instructor
SET salary = CASE
    WHEN salary <= 100000 then salary * 1.05
    ELSE salary * 1.03
END
```

☐

```
UPDATE instructor
SET salary = CASE
    WHERE salary <= 100000 then salary * 1.05
    ELSE salary * 1.03
END
```

☐

```
UPDATE instructor
SET salary = CASE
    WHEN salary <= 100000 then salary * 1.05
    AND salary * 1.03
END
```

Yes, the answer is correct.

Score: 2

Accepted Answers:

```
UPDATE instructor
SET salary = CASE
    WHEN salary <= 100000 then salary * 1.05
    ELSE salary * 1.03
END
```

Which among the following is/are true about SQL queries and subqueries?

2 points

- ☐ SQL allows a subquery expression to be used in the FROM clause.
- ☐ A scalar subquery is used when multiple values are expected.
- ☐ The WITH clause provides a way of defining a temporary relation whose definition is available only to the query in which the WITH clause occurs.
- ☐ A subquery is a select-with-where expression that is nested within another query.

Yes, the answer is correct.

Score: 2

Accepted Answers:

SQL allows a subquery expression to be used in the FROM clause.
The WITH clause provides a way of defining a temporary relation whose definition is available only to the query in which the WITH clause occurs.

Consider the following SQL query.

2 points

```
SELECT DISTINCT course_id
FROM section
WHERE semester = 'Fall' and year= 2020 and course_id
not in
    (select course_id
     FROM section
     WHERE semester = 'Spring' and year= 2021);
```

Which among the following is/are true for the SQL query shown above ?

- ☐ It will return the course ID of those courses which are offered in Fall 2020 but not offered in Spring 2021.
- ☐ It will return the course ID of those courses which are offered in Spring 2020 but not offered in Fall 2021.
- ☐ The SELECT DISTINCT statement returns only unique values.
- ☐ None of the above

Yes, the answer is correct.

Score: 2

Accepted Answers:

It will return the course ID of those courses which are offered in Fall 2020 but not offered in Spring 2021.

The SELECT DISTINCT statement returns only unique values.
