

Which among the following statements is/are true regarding triggers?

☐

In order to design a trigger mechanism, we must specify the conditions under which the trigger is to be executed.

☐

In order to design a trigger mechanism, we must specify the actions to be taken when the trigger executes.

☐ Triggers cannot be activated before an event.

☐ All of the above.

Yes, the answer is correct.

Score: 2

Accepted Answers:

In order to design a trigger mechanism, we must specify the conditions under which the trigger is to be executed.

In order to design a trigger mechanism, we must specify the actions to be taken when the trigger executes.

Triggers can become dangerous when

2 points

☐ Joins are performed in the trigger body

☐ Triggers call triggers

☐ Recursive triggers are set to OFF

☐ All of the above

Partially Correct.

Score: 1

Accepted Answers:

Joins are performed in the trigger body

Triggers call triggers

Consider the given definition of a function which operates on a predefined table, with the schema **Employee**(*eid integer, ename varchar*).

```
CREATE FUNCTION fun1(param1 INTEGER, param2 VARCHAR default NULL)
RETURNS TABLE(tid INT, tname VARCHAR) AS $$
BEGIN
UPDATE Employee SET ename = param2 WHERE Employee.eid = param1;
RETURN QUERY
SELECT eid,ename FROM Employee;
END;
$$ language plpgsql;
```

Answer questions 3 and 4 with respect to the given function 'fun1'.

Choose all the allowed ways to invoke fun1.

2 points

- ☐ fun1(60);
- ☐ select fun1(60);
- ☐ fun1(60,'Robert');
- ☐ select * from fun1(60,'Robert');

No, the answer is incorrect.

Score: 0

Accepted Answers:

select fun1(60);
select * from fun1(60,'Robert');

Choose all the PostgreSQL statements which are valid.

2 points

- ☐ select tname from fun1(55);
- ☐ select ename from fun1(55);
- ☐ select * from fun1(55), Employee;
- ☐ delete from fun1(55);
- ☐ update fun1(55) set tname = 'Meghna' where tid = '2';

No, the answer is incorrect.

Score: 0

Accepted Answers:

```
select tname from fun1(55);  
select * from fun1(55), Employee;
```

Which of the following keywords is used for invoking a stored procedure?

2 points

- ☐ CALL
- ☐ CREATE
- ☐ INVOKE
- ☐ BEGIN

No, the answer is incorrect.

Score: 0

Accepted Answers:

CALL

Consider the following statements.

2 points

1. Any logic that can be applied using the 'if-then-else' construct, can also be applied using 'case' statement.
2. Incorporating external language routines helps in performing complex computations.

- ☐ Only statement 1 is true.
- ☐ Only statement 2 is true.
- ☐ Both statements are true.
- ☐ Both statements are false.

No, the answer is incorrect.

Score: 0

Accepted Answers:

Both statements are true.

Consider the following statements.

2 points

1. Stored procedures can be executed using the SELECT statement
2. Unlike functions, stored procedures cannot be nested in other SQL commands.

Choose the correct option with respect to functions and stored procedures in PostgreSQL.

- ☐ Only statement 2 is true
- ☐ Both statements are true
- ☐ Only statement 1 is true
- ☐ Both statements are false

No, the answer is incorrect.

Score: 0

Accepted Answers:

Only statement 2 is true

For a PostgreSQL function named 'fun1' with no parameters, which of the following are correct SQL statements?

2 points

- ☐ SELECT * FROM fun1();
- ☐ SELECT fun1();
- ☐ RUN COUNT(*) FROM fun1();
- ☐ CALL fun1();

No, the answer is incorrect.

Score: 0

Accepted Answers:

SELECT * FROM fun1();
SELECT fun1();

Which of the following are conditional statements?

2 points

- ☐ if-then-else
- ☐ loop
- ☐ begin
- ☐ while

No, the answer is incorrect.

Score: 0

Accepted Answers:

Which of the following is a valid type of trigger?

2 points

- ☐ BEFORE INSERT
- ☐ DURING UPDATE
- ☐ DURING DELETE
- ☐ AFTER DELETE

No, the answer is incorrect.

Score: 0

Accepted Answers:

BEFORE INSERT
AFTER DELETE

Choose all the correct statements about triggers.

2 points

- ☐ Row-level trigger fires atleast once even if no rows are affected by a triggering event
- ☐ Statement-level trigger fires atleast once even if no rows are affected by a triggering event.
- ☐ Transition table stores the initial and final values of attributes for the affected rows
- ☐ Triggers are very helpful as we can perform computationally intensive operations inside triggers.

No, the answer is incorrect.

Score: 0

Accepted Answers:

Statement-level trigger fires atleast once even if no rows are affected by a triggering event.
Transition table stores the initial and final values of attributes for the affected rows

Select all the suitable options where usage of trigger is recommended.

2 points

- ☐ Employee Log sheet
- ☐ Input validation
- ☐ Sending notification mails

☐ Displaying views

No, the answer is incorrect.

Score: 0

Accepted Answers:

Employee Log sheet
Input validation
