

In _____, a lower-level entity set inherits all the attributes and relationship participation of the higher-level entity set.

- ☐ Entity inheritance
- ☐ Attribute inheritance
- ☐ Relationship inheritance
- ☐ Roles inheritance

Consider the following statements and choose the correct option.

2 points

Statement 1: Any non-binary relationship can be represented using binary relationships by creating an artificial entity set.

Statement 2: It is not possible to replace any non-binary relationship set by a number of distinct binary relationship sets.

- ☐ Both the statements are false
- ☐ Statement 1 is true and statement 2 is false
- ☐ Statement 1 is false and statement 2 is true
- ☐ Both the statements are true

Which of the following E-R diagrams represents many-to-many relationship?

2 points

Which of the following E-R diagrams represents one-to-one relationship?

2 points

Which among the following is/are true for the E-R diagram shown in figure 12?

2 points

Figure 12: ERD

☐ There is partial participation from **E1** in **R**.

☐ There is total participation from **E2** in **R**.

It is equivalent to

☐ There is total participation of **E1** and partial participation of **E2** in **R**.

In _____, we designate sub-groupings within an entity set that are distinctive from other entities in the set. **2 points**

- ☐ Bottom-up design process
- ☐ Top-down design process
- ☐ Generalization
- ☐ Relational Algebra

_____ combines a number of entity sets that share the same features into a higher level entity set. **2 points**

- ☐ Bottom-up design process
- ☐ Top-down design process
- ☐ Specialization
- ☐ Relational Algebra
